

PROJECT REPORT

Name: PRIYANSHU JAIN

Registration Number: 25BAI11181

Branch: CSE (AI & ML)

Year: First Year

Course Code: CSE0001 – Digital Literacy

Institution: VIT Bhopal University

Introduction

This project focuses on developing digital literacy skills which are essential in today's technology-driven world. As a Student Digital Ambassador, my role is to guide peers in understanding digital tools, maintaining a professional online presence, and ensuring safe internet practices. Through this project, I explored various platforms, practiced coding basics, learned professional communication, and studied cybercrime awareness. The project not only enhanced my technical knowledge but also improved my ability to present and communicate information effectively in a digital environment.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva. The infographic highlights important aspects such as safe internet practices, useful digital tools for students, and maintaining a professional online identity. I included points like using strong passwords, avoiding suspicious links, and using platforms like Google Docs and GitHub for academic purposes.

The design was structured to be visually appealing with icons, colors, and short text to make it easy to understand. The most interesting part was converting theoretical concepts into visual elements. However, the challenging part was maintaining a balance between design and content clarity. This task helped me improve my creativity and ability to simplify complex information.

Task 2: Student Digital Portfolio

In this task, I created and updated profiles on GitHub, LinkedIn, and HackerRank. GitHub serves as a platform to showcase coding projects and repositories. LinkedIn helps in building a professional network and sharing academic achievements. HackerRank is used for practicing coding and improving problem-solving skills.

Over the next four years, I plan to actively use GitHub to upload my projects and collaborate with others. LinkedIn will help me connect with industry professionals and explore internship opportunities. HackerRank will assist me in strengthening my coding skills. This task made me realize the importance of maintaining a professional digital presence from the early stages of my career.

Task 3: Coding & Collaboration Platforms

For coding practice, I used HackerRank and completed a beginner-level problem. This helped me understand the basics of problem-solving and logical thinking. Additionally, I created a Google Form consisting of five questions related to digital literacy awareness. The form included multiple-choice and short-answer questions.

These tools are highly beneficial for academic growth. Coding platforms improve analytical thinking, while collaboration tools like Google Forms help in data collection and teamwork. This task enhanced my understanding of how digital platforms can be used effectively for learning and collaboration.

Task 4: Email Etiquette & Communication

Professional communication is a key aspect of digital literacy. Poorly written emails can lead to misunderstandings and create a negative impression. For example, sending an email without a subject line or using informal language when communicating with professors can be inappropriate.

To avoid such issues, it is important to follow proper email etiquette, including a clear subject line, polite greeting, structured content, and a professional closing. This task helped me understand how to communicate effectively in academic and professional environments and the importance of clarity and respect in digital communication.

Task 5: Cybercrime Awareness

Cybercrime is a growing concern in the digital world. I studied phishing attacks, where attackers trick users into revealing sensitive information through fake emails or websites. These attacks often target students and individuals who are not aware of such threats.

What surprised me the most is how realistic these scams can appear, making it difficult to differentiate between genuine and fake sources. As a result, I will be more cautious while clicking on links and sharing personal information online. This task increased my awareness of cybersecurity and encouraged me to adopt safer digital practices.

Conclusion

Overall, this project was a valuable learning experience that enhanced my understanding of digital literacy. I learned about various digital tools, professional communication, and online safety practices. These skills are essential for both academic success and future career growth. This project has prepared me to use digital platforms responsibly and effectively.
