

PROJECT REPORT

Name: PRIYANSHU JAIN

Registration Number: 25BAI11181

Branch: CSE (AI & ML)

Year: First Year

Course Code: CSE0001 – Digital Literacy

Institution: VIT Bhopal University

This project is about literacy skills. These skills are really important in today's world because everything is digital. As a Student Digital Ambassador my job is to help my fellow students understand how to use tools, make a good online profile and stay safe on the internet. During this project I tried out platforms, learned the basics of coding and studied how to communicate professionally. I also learned about cybercrime awareness. This project did not just help me learn more about technology. It also helped me become better at presenting information in a digital setting.

Task 1: Digital Literacy Infographic

For this task I made an infographic about literacy using Canva. The infographic talks about things like safe internet practices, useful digital tools for students and how to make a professional online profile. I included tips like using passwords, avoiding bad links and using Google Docs and GitHub for school work.

The design was made to be easy to look at with pictures, colors and short sentences. The best part was turning ideas into pictures. The hard part was making sure the design was good and the information was clear. This task helped me become more creative and better at explaining things in a simple way.

Task 2: Student Digital Portfolio

In this task I made profiles on GitHub, LinkedIn and HackerRank. GitHub is where I show my coding projects. LinkedIn is where I connect with professionals and share what I have done in school. HackerRank is where I practice coding and solve problems.

Over the four years I plan to use GitHub a lot to share my projects and work with others. LinkedIn will help me meet people in my field and find internships. HackerRank will help me get better at coding. This task taught me why it is important to have an online profile from the start of my career.

Task 3: Coding & Collaboration Platforms

To practice coding I used HackerRank and finished a beginner problem. This helped me understand how to solve problems and think logically. I also made a Google Form with five questions about literacy. The form had choice and short answer questions.

These tools are really helpful for learning. Coding platforms help me think critically and collaboration tools like Google Forms help me work with others and collect data. This task helped me understand how digital platforms can be used for learning and working together.

Task 4: Email Etiquette & Communication

Communicating professionally is a part of digital literacy. If you write an email it can be misunderstood and make a bad impression. For example sending an email without a subject or using language with teachers is not a good idea.

To avoid this it is important to follow the rules of email etiquette like having a subject, a polite greeting organized content and a professional closing. This task helped me learn how to communicate in school and at work and why it is important to be clear and respectful in digital communication.

Task 5: Cybercrime Awareness

Cybercrime is a problem in the digital world. I learned about phishing attacks, where bad people trick you into giving them information through fake emails or websites. These attacks often target students who do not know about these threats.

What surprised me the most is how real these scams can look, making it hard to tell what is real and what is fake. So I will be more careful when I click on links and share information online. This task made me more aware of cybersecurity. Encouraged me to be safer online.

Overall this project was a learning experience that helped me understand digital literacy better. I learned about tools, professional communication and online safety. These skills are necessary for doing in school and, in my future career. This project taught me how to use platforms in a responsible and effective way.
